

To Map to your P Drive from a Mac

First, connect your computer to the Internet and then connect to the Oneonta VPN. Once you are successfully connected:

In Finder, in the "Go" menu, select "Connect to Server."

A "Connect to Server" window will open. In the "Server Address" field enter "smb" followed by the drive path.

smb://pdrives.oneonta.edu/users\$/username, where username is your Oneonta username (ex.: bidwella)

Enter your Oneonta password.

An "SMB Mount" will occur. The drive you selected will show up in the Finder sidebar and on your desktop with a globe icon.

To disconnect use the 'eject' icon next to the name of the share you just mapped.
