

Exporting a Course

From the ANGEL 7.4 Instructor Reference Manual

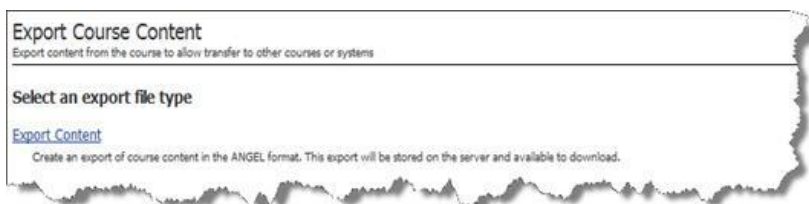

To protect your content or reuse it in a different course, you can choose to export that content. Note that an export does not contain student data and submissions, so if that information is needed, you should use the Backup and Restore tool.

To export a course, do the following:

1. Go to **Manage > Export Console**. The Export Console page appears.

2. Select the **Export Content** hyperlink on the next page.

3. The next page allows you to choose the data that you want to export. It is arranged by the tabs of your course, allowing you to select only the items that you want to export. If you click the **Lessons/Content** hyperlink, you can select individual content items to export instead of exporting everything.

4. Click the **Export** button at the bottom of the screen to continue. The export will happen as a background process, which might take some time. You can browse around your course or exit your course while the export occurs. Return to the Export Console later to download the export to local storage.
