

Create links to content that already exists in the ANGEL course.

First, add the content to a folder (it can be hidden or unhidden).

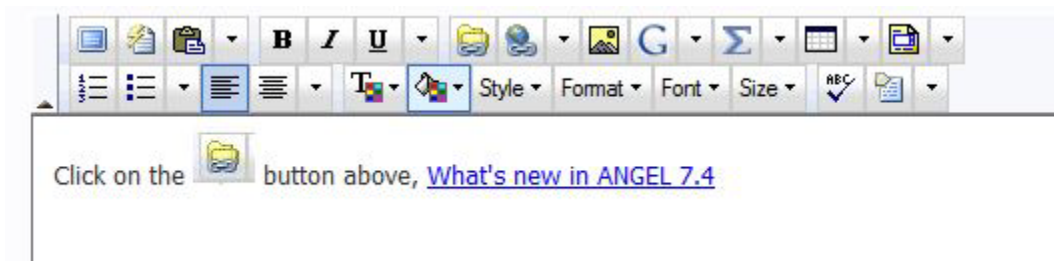

Now create a drop box, assessment, or a page that will have the new link in it. Inside the ANGEL HTML editor, click on the  button. Change the tab to the "Map" tab

Browse to the area that has the content you want to link to, and then select the content.

The link to your content will now be displayed in the editor window

Click on "Save" at the bottom of the window, and then you can preview by clicking on the content item. Click on the link, and it will take you to the linked content (or open the application that the content triggers (e.g. MS Word)).
